

connect\_\_on\_authorised

handle\_\_connack

db\_\_message\_write\_inflight  
\_out\_all

```
graph LR; A[connect__on_authorised] --> C[db__message_write_inflight_out_all]; B[handle__connack] --> C;
```

The diagram illustrates a flow where two separate functions, 'connect\_\_on\_authorised' and 'handle\_\_connack', both point to a single target box labeled 'db\_\_message\_write\_inflight\_out\_all'. The target box is shaded gray, while the source boxes are white. Blue arrows indicate the direction of the flow from the source boxes to the target box.
